**Our industry solution for construction and materials industry**

# Building materials with climate protection contribution

Start now on the basis of your EPD (DIN 15804)

Financing climate protection is the final and necessary step towards a CO<sub>2</sub> balanced product with climate protection contribution and a clear option for your customers.

Financing climate protection of construction and materials on the basis of EPDs and myclimate-*Calculate*

## Achieve the climate target with financing climate protection

In Germany, the building materials and building sector is considered one of the major emitters of climate gases. Many manufacturers are already following the declared policy goal of being climate-neutral by 2045.

The production of construction materials is energy- and material-intensive. For many production processes, the technical solutions for a completely CO<sub>2</sub> free production are still missing. Nevertheless, construction and material manufacturers can achieve their climate target through voluntary CO<sub>2</sub> offsetting. myclimate offers them an efficient and flexible industry solution for this based on already existing EPDs.

## Your EPD serves as the basis for the CO<sub>2</sub> calculation

To make a climate protection contribution for product groups or individual orders in climate protection projects, all product-relevant CO<sub>2</sub> emissions must be calculated. Based on your already existing EPDs, this step is omitted. The input of order-related data (transport, quantities) is possible.

The Access to myclimate-*Calculate* – our web portal – gives you the possibility of booking orders flexibly, selecting from various climate protection projects, obtaining your own climate protection contribution confirmation for your customers, and get direct access to our Impact label.

## Your benefits

Reach your climate goal faster with the integrated industry solution from myclimate:

- Pay-as-you-go: Flexible climate protection contribution for individual orders, customers or entire product groups
- Involve your customers in the flexible choice and option for CO<sub>2</sub>-balanced products including climate protection contribution
- Maximum transparency with the climate neutral label from myclimate incl. tracking number (QR code) and individual certificates
- Start immediately with already existing EPDs (DIN 15804)

## Costs

myclimate offers you a web-based software solution for flexible financing climate protection of your products.

---

CO <sub>2</sub> Calculation	Not necessary with existing EPD
-----------------------------	---------------------------------

---

User license	starting from 790 per year
--------------	----------------------------

---

Label use and certificates	inclusive
----------------------------	-----------

---

climate protection contribution price\* 12–60 Euro per t CO<sub>2</sub>

\* Depending on the selected climate protection project

## About myclimate

myclimate Deutschland gGmbH is a non-profit climate protection organization and subsidiary of the Swiss foundation myclimate. Together with partners from the business community as well as private individuals, myclimate aims to shape the future of the world through consulting and educational services as well as its own carbon offset projects.

myclimate advises companies on integrated climate protection with tangible added value, carries out CO<sub>2</sub> balancing of companies and events, prepares life cycle assessments of products and offers the possibility to support effective climate protection projects to the extent of the company's own emissions. The international carbon offset projects of myclimate meet the highest quality standards and contribute to the 17 SDGs. In addition, myclimate offers educational opportunities for learners and conducts corporate workshops.
